C# 7 has added basic pattern matching to the is operator. This means you won't need as as often and your code will be slightly more readable. When casting, it'll be easier to distinguish null values from type mismatches and it'll be easier to work with non-nullable types. You'll also be able to eliminate some nasty inline assignments by using ...

Note. Tuples were available before C# 7.0, but they were inefficient and had no language support. This meant that tuple elements could only be referenced as Item1, Item2 and so on. C# 7.0 introduces language support for tuples, which enables semantic names for the fields of a tuple using new, more efficient tuple types.

As well as finally seeing the RTM of the .NET Core tooling, Visual Studio 2017 brought a whole host of new things to the table. Among these is C# 7.0, which introduces a number of new features to the language.. Many of these features are essentially syntactic sugar over things that were already possible, but were harder work or more cumbersome in earlier versions of the language.
