### **Capacity Management | IT Process Wiki**

Capacity Management is one of the well-defined ITSM processes operating under Service Design process group of the ITIL best practice framework. As defined in ITIL V3, Capacity Management is a process used to ensure that the Service Provider has adequate IT resources to meet current and future business requirements in a cost-effective manner.

### **ITIL Capacity Management | ITIL Tutorial | ITSM - CertGuidance**

Capacity management is (or at least should be) a core strategic process of your IT service management (ITSM) practice – as understanding the capacity of each IT service, and the factors affecting capacity of services, is a key element of building appropriate and impactful service level agreements (SLAs). And, in turn, this level of capacity should represent the business essentials that organizations need to achieve.
