Die Multi-Agenten-Simulation in der Informatik wendet das Konzept der Multi-Agenten-Systeme in der Simulation an. Aktive Komponenten des zu untersuchenden Systems werden als Agenten betrachtet, deren Verhalten einzeln spezifiziert wird. Damit können insbesondere emergente Phänomene und dynamische Wechselwirkungen zwischen Agenten nachgewiesen werden. Multi-Agenten-Simulation ist sehr ...

This article presents an overview of multi-agent system models of land-use/cover change (MAS/LUCC models). This special class of LUCC models combines a cellular landscape model with agent-based representations of decision making, integrating the two components through specification of interdependencies and feedbacks between agents and their environment.

complex systems. Luck et al. (2005) make a distinction between two main Multi-Agent System (MAS) paradigms: multi-agent decision systems and multi-agent simulation systems. In multi-agent decision systems, agents participating in the system must make joint decisions as a group. Mechanisms for joint decision-making can be based on economic ...

INTRODUCTION TO MULTI-AGENT SIMULATION - arXiv

A multi-agent system (MAS or "self-organized system") is a computerized system composed of multiple interacting intelligent agents [citation needed]. Multi-agent systems can solve problems that are difficult or impossible for an individual agent or a monolithic system to solve. Intelligence may include methodic, functional, procedural approaches, algorithmic search or reinforcement learning.

Bei einem Multiagentensystem oder MAS handelt es sich um ein System aus mehreren gleichartigen oder unterschiedlich spezialisierten handelnden Einheiten, Software-Agenten, die kollektiv ein Problem lösen.. Multiagentensysteme existieren sowohl in der Biologie (natürliche Multiagentensysteme) als auch in der Technik. Eine Beispielfamilie biologischer Multiagentensysteme stellen Ameisenstaaten ...

Welcome to the Multi Agent Systems and Simulation Research Group The MASS group specializes in Multi-Agent Systems, Cellular Automata and statistical simulations. Much of the work we do is social and/or ecological simulations aimed at discovering whether our understanding of these systems is accurate or prediction of how such systems may change.
